Feedback Exercise

Feedback Team:
Aaron_Dayley-u0570375
Alessandro Ferrero-u1046481
Clint Rollins-u0476170

To begin with, we can say that the feedback which we had got from the other team was really helpful and worth reckoning. We found out that there were quite a few things which we can't ignore and are using in our project. For example, earlier we weren't using the Parallel Plot. But , now we are making a <u>Parallel Plot Design</u> also in our project so that we can show many attributes of one particular year at a same. Apart from this, they also told us to use <u>Filters</u> also which we had decided that we might use, but we weren't sure about that. After pondering a lot, we decided to add filters like a drop-down menu having one or two more extra things as compared to the project proposal. Then after that, there were quite a few things which had matched with our TA feedback such as in Data preprocessing it shouldn't look like we are having a biased data. Apart from this, they advised in <u>node -link design</u> to make sure that the circles aren't big enough. Unfortunately our TA suggested that it's not a feasible idea to use node-link diagram, so we decided to discard that idea.

Overall the feedback session was really productive for us. Our few doubts which we had in our mind also got resolved. The feedback team provided their inputs with the same level of dedication such as ours. It was quite motivating and inspiring session as well as we could saw that how the other teams were participating in this session .

The quality of the feedback was good enough and it was fair as they had proper explanation for whatever they told us. It was really helpful as whatever the feedback we got, we discussed with the TA as well. So after that a lot of clarity was there and finally we could come up with proper designs which are really effective in what we are trying to tell other people.
